PROFESSIONAL SUMMARY

Software Engineer with 2 years' experience across frontend development (React, JavaScript) and full-stack project delivery (Java, Spring Boot, MySQL). Currently working on an AI-assisted frontend modernization (vanilla JavaScript to React) for a customer-facing banking authentication platform, alongside application support and security remediation. Full-stack foundation built through independent project ownership and backend internship experience.

PROJECTS

StockPulse: Data-Driven Market Insights | Jan 2024 – May 2024

- Owned end-to-end development of a stock analytics platform: built authentication, dashboards, and responsive UI (HTML, CSS, JavaScript), and integrated backend ML predictions (LSTM, GRU, GAN, WGAN-GP) via REST APIs
- Built interactive data visualizations and an AI-powered chatbot, translating financial indicators and model outputs into user-facing insights

Blogging Platform (Personal Project) | Aug 2026

- Built a full-stack blogging application with Spring Boot (REST APIs, Spring Data JPA) and React, supporting CRUD operations on posts with persistent storage in MySQL
- Implemented user authentication and access control (Spring Security) for secure login and content management

WORK EXPERIENCE

Software Engineer | Accenture | Bangalore, India

Oct 2024 – Present

- Work on frontend modernization across 4 core components within a 20-person engineering team; jointly delivered the first component's frontend with a senior engineer, now taking independent ownership of subsequent components
- Contributing to an AI-assisted migration of legacy vanilla JavaScript to React (Copilot-assisted development), converting existing UI logic into React components and connecting them to REST APIs; migration is in the analysis/integration phase, part of a broader platform upgrade (Java 11→17, Spring Framework → Spring Boot, on-premise → Azure)
- Identified and fixed a Content Security Policy misconfiguration exposing sensitive data; resolved 25+ vulnerable-dependency security tickets per company standards
- Investigate client-raised incidents (login failures, errors) via Splunk/TeraGrep log analysis, identify root cause, and communicate resolution via ServiceNow; also handle audit log extraction requests
- Manage CI/CD deployment to the test environment via Jenkins, including pipeline triggering, monitoring, and post-deployment validation
- Participate in Agile delivery: sprint planning, daily standups, and biweekly client stakeholder calls; work directly with the client on ticket updates and blockers

Software Developer (Intern) | Larsen & Toubro – SWC | Bangalore, India

May 2022 – Jul 2022

- Designed and developed a full-stack GIS web application integrating OpenStreetMap with a Network Management System (Zabbix), visualizing 1000+ infrastructure nodes with real-time availability, using PHP/MySQL authentication and role-based access control
- Implemented zoom-level marker clustering (Leaflet.js), reducing map load time by ~45% for dense datasets, and RESTful API-based data access via Axios, improving API response latency by ~30%

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL

Frontend: React JS, JavaScript, HTML/CSS, Leaflet.js

Backend: Spring Boot, Spring MVC, REST APIs, Spring Data JPA, Spring Security

Databases: MySQL

Cloud/Infra: Azure, Jenkins CI/CD

Auth/Security: OIDC, SAML (adjacent), JWT

Tools: Git, Bitbucket, Postman, JUnit, Splunk, ServiceNow, JIRA

EDUCATION

Vellore Institute of Technology, Vellore — B.Tech, Computer Science and Engineering | Aug 2024 | CGPA: 8.71/10

Don Bosco School, Park Circus, Kolkata — ISC | May 2020 | 94.75%

CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate (AZ-104) | Microsoft | Sep 2026
- Oracle Cloud Infrastructure 2025 Certified Foundations Associate | Oracle | Oct 2025
- Generative AI Foundations Certificate (with Microsoft) | upGrad | Sep 2025
